

Practical 1: Android Studio setup for Flutter development with along with Dart SDK.

Solution:

Step 1: Installing a Flutter.

i. System Requirements:

- Assure that your system meets the minimum requirements. Flutter supports macOS, Linux, and Windows.
- On macOS, you need Xcode with the command-line tools installed.
- On Linux, you need to have git, lib32stdc++6, and other dependencies installed.

ii. Download Flutter:

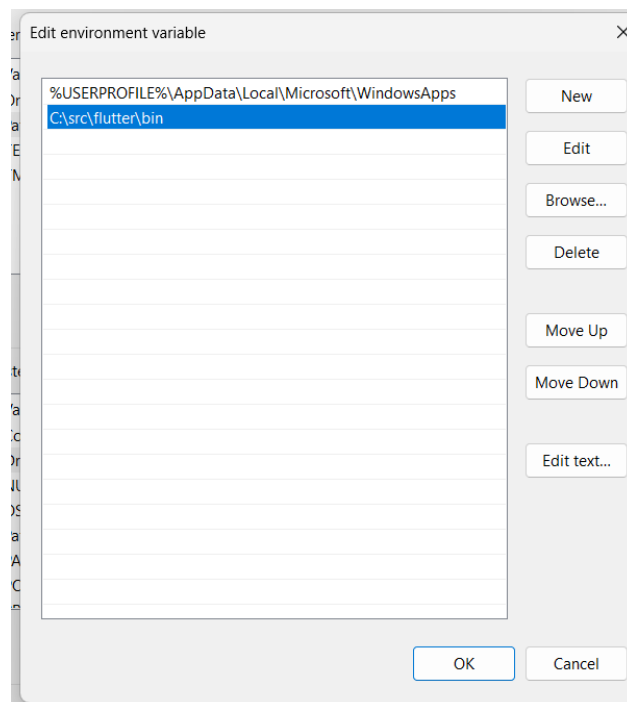

- Visit Flutter Website for Installation of Flutter -> <https://docs.flutter.dev/get-started/install>.

iii. Extract Flutter:

- If you downloaded the ZIP file, extract it to a location on your machine. (**C:\src\flutter**).

iv. Set Up Environment Variables:

- Add the **C:\src\flutter\bin** directory to your system's PATH variable.

v. Run flutter doctor:

- Open a terminal and run the following command: flutter doctor
- This command checks your environment and displays a report of any missing dependencies or issues.

vi. Install Flutter Dependencies:

- Follow the instructions provided by flutter doctor to install any missing dependencies. This may include things like Android Studio, Xcode command-line tools, etc.

Step 2: Installing Android Studio.

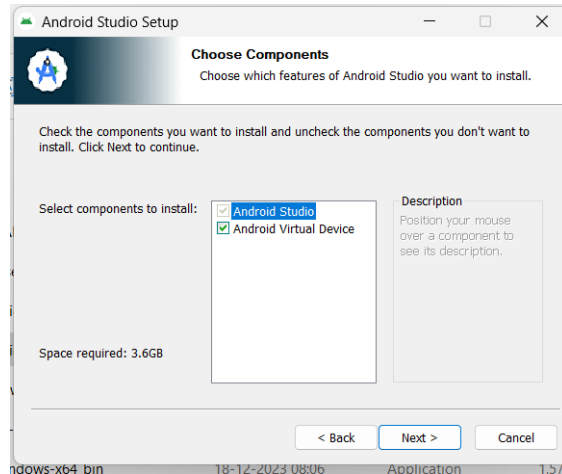

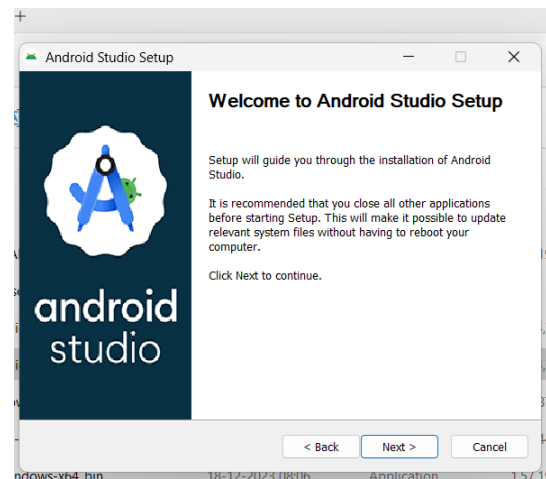

i. Download Android Studio:

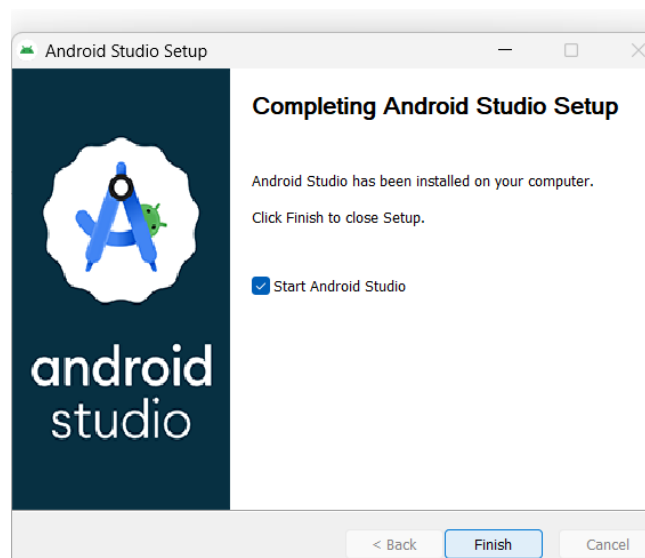

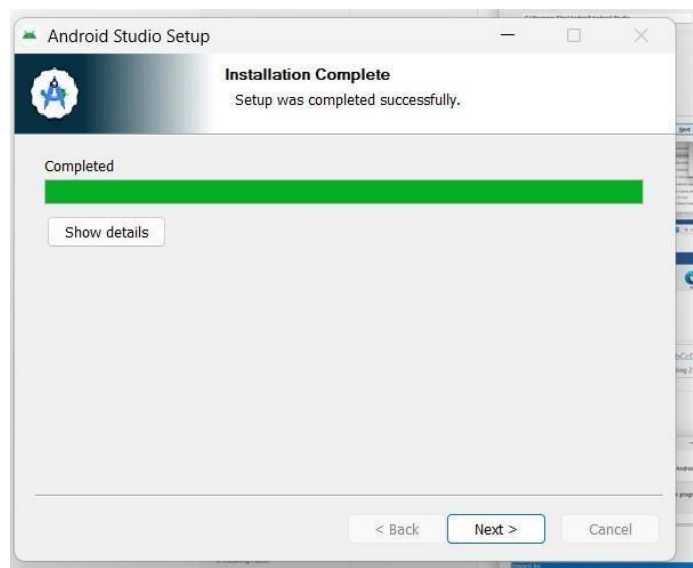

- Visit the Android Studio download page.
- Click on the "Download" button and download the Windows version.

ii. Run the Installer:

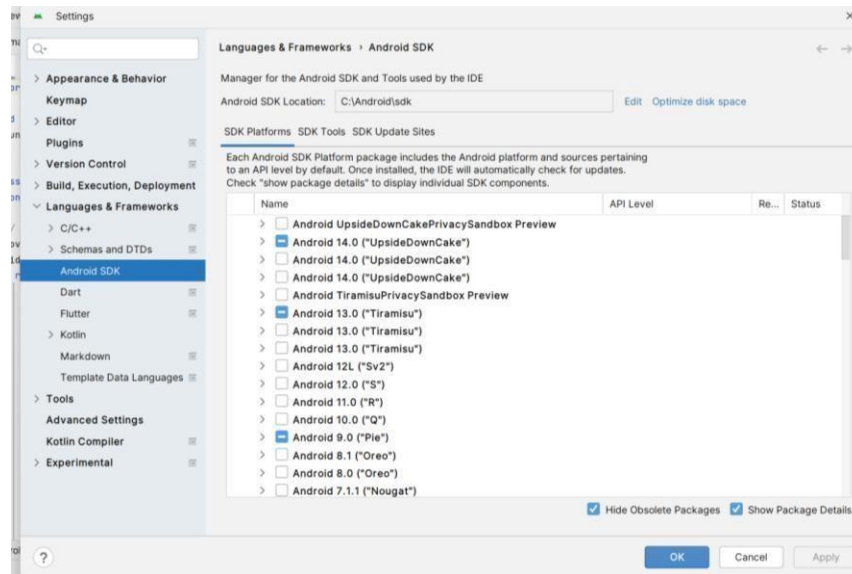

- Once the download is complete, run the installer executable (.exe) file.

iii. Follow Installation Wizard:

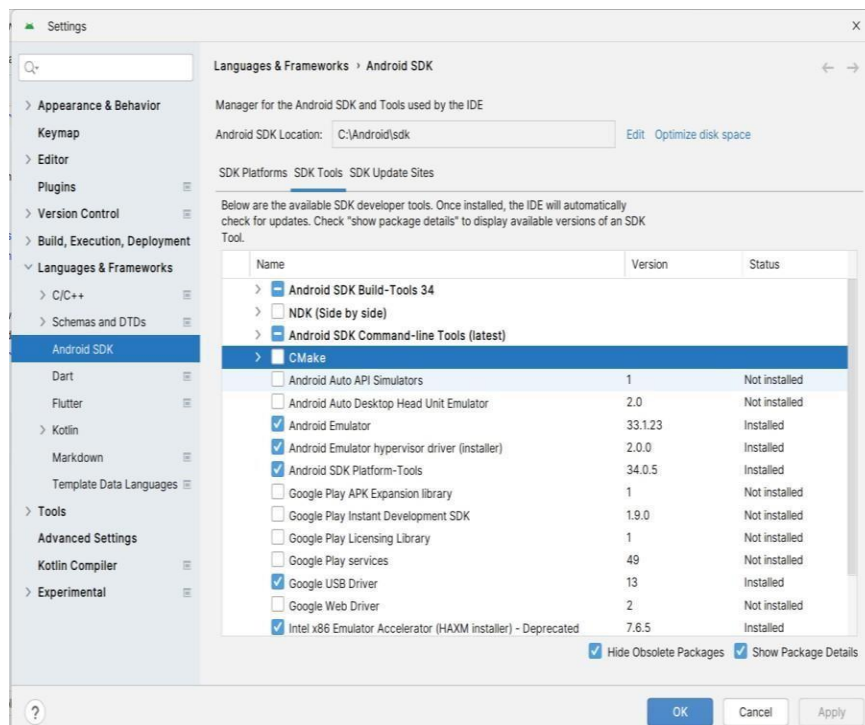

○ **Android SDK Platforms:**

○ **Android SDK Tools:**

Step 3: Run Following Command for checking Flutter dependencies on after installation of android.

iv. Accept Android Licenses

- Flutter doctor --android-licenses to develop for Android, you need to accept the Android licenses.
- Run the following command: **flutter doctor --android-licenses**

Practical 2: Create a “Hello Flutter” application. Main.dart:

```
import 'package:flutter/material.dart';

void main() {
  runApp(const MyApp());
}

class MyApp extends StatelessWidget {
  const MyApp({super.key});

  @override
  Widget build(BuildContext context) {
    return MaterialApp(
      title: 'Flutter Demo',
      theme: ThemeData(
        ),
      home: const MyHomePage(title: 'My Intro using Flutter App'),
    );
  }
}

class MyHomePage extends StatefulWidget {
  const MyHomePage({super.key, required this.title});

  final String title;

  @override
  State<MyHomePage> createState() => _MyHomePageState();
}

class _MyHomePageState extends State<MyHomePage> {

  @override
  Widget build(BuildContext context) {

    return Scaffold(
      appBar: AppBar(

        backgroundColor: Theme.of(context).colorScheme.inversePrimary,
        title: Text(widget.title),
      ),
      body: Center(
        child: Column(
          mainAxisAlignment: MainAxisAlignment.center,
          children: <Widget>[
            //Image.asset("assets/images/deskt.png", height: 350, width: 350),
            const Text(
              'Name : - Nandan Bhimani',
              style: TextStyle(color: Colors.orange, fontSize: 18),
            ),
            const Text(
              '\nEnrollment No : - 92210103018',
              style: TextStyle(color: Colors.blue, fontSize: 18),
            ),
            const Text(
```

```

        '\n Class : 6TC3 - C',
        style: TextStyle(color: Colors.green, fontSize: 18),
    ),
    const Text(
        '\n University : - Marwadi University',
        style: TextStyle(color: Colors.red, fontSize: 18),
    ),
  ],
),
),
);
}
}

```

Output:

Practical 3: Create and application using Flutter Key Widgets:

```
import 'package:flutter/material.dart';

void main() {
  runApp(const MyApp());
}

class MyApp extends StatelessWidget {
  const MyApp({super.key});

  @override
  Widget build(BuildContext context) {
    return MaterialApp(
      title: 'Flutter Demo',
      theme: ThemeData(
        colorScheme: ColorScheme.fromSeed(seedColor: Colors.deepPurple),
        useMaterial3: true,
      ),
      home: const MyHomePage(title: 'Flutter Buttons'),
    );
  }
}

class MyHomePage extends StatefulWidget {
  const MyHomePage({super.key, required this.title});

  final String title;

  @override
  State<MyHomePage> createState() => _MyHomePageState();
}

class _MyHomePageState extends State<MyHomePage> {

  @override
  Widget build(BuildContext context) {
    return Scaffold(
      appBar: AppBar(
        backgroundColor: Theme.of(context).colorScheme.inversePrimary,
        title: Text(widget.title),
      ),
      body: Center(
        child: Column(children: <Widget>[
          Text('Types of Button in Flutter',style: TextStyle(fontSize: 25).),
          Container(
            margin: EdgeInsets.all(35),
            child: FloatingActionButton(
              child: Text(
                'Float BTN',
              ),onPressed: () {},
            ),
          ),
          Container(
            margin: EdgeInsets.all(25),
            child: OutlinedButton(
```

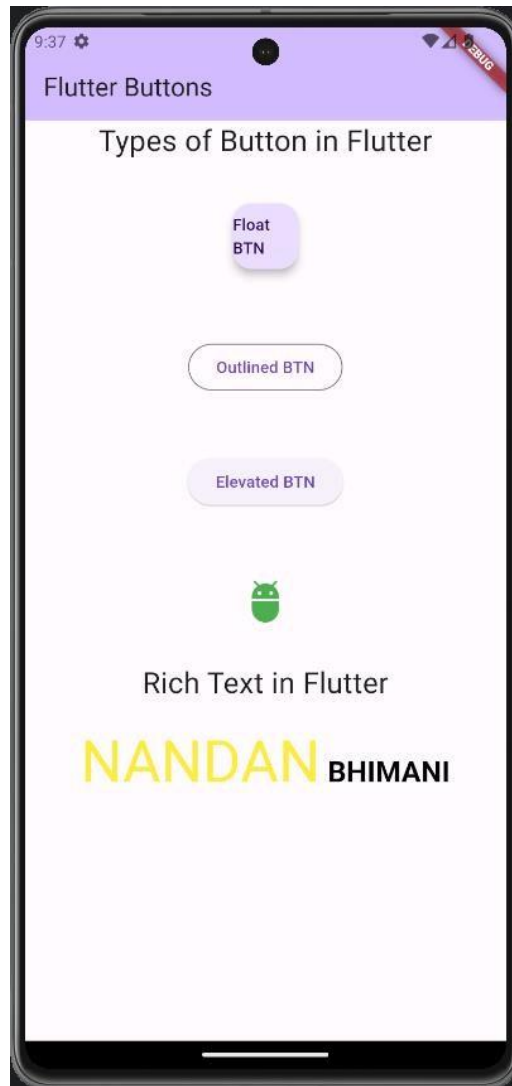

```

        child: Text(
          'Outlined BTN'
        ), onPressed: () {}),
      ),
    ),
    Container(
      margin: EdgeInsets.all(25),
      child: ElevatedButton(
        onPressed: () { },
        child: Text(
          'Elevated BTN'
        ),
      ),
    ),
    Container(
      margin: EdgeInsets.all(25),
      child: IconButton(onPressed: () {
        },
        icon: Icon(Icons.adb),
        iconSize: 40,
        color: Colors.green,
      ),
    ),
    Text('Rich Text in Flutter', style: TextStyle(fontSize: 25),),
    Container(
      padding: EdgeInsets.all(20),
      child: RichText(
        text: const TextSpan(
          text: "NANDAN",
          style: TextStyle(
            color: Colors.yellow,
            fontSize: 50,
          ),
        ),
        children: [
          TextSpan(
            text: ' BHIMANI',
            style: TextStyle(
              fontWeight: FontWeight.bold,
              color: Colors.black,
              fontSize: 25,
            ),
          ),
        ],
      ),
    ),
  ],
),
),
),
],
),
),
);
}
}:

```

Output:

Practical 4: Create and application using Flutter Key Widgets:

```
import 'package:flutter/material.dart';

void main() {
  runApp(const MyApp());
}

class MyApp extends StatelessWidget {
  const MyApp({super.key});
  @override
  Widget build(BuildContext context) {
    return MaterialApp(
      title: 'Flutter P3',
      theme: ThemeData(

        colorScheme: ColorScheme.fromSeed(seedColor: Colors.deepPurple),
        useMaterial3: true,
      ),
      home: const MyHomePage(title: 'Flutter Row and Column'),
    );
  }
}

class MyHomePage extends StatefulWidget {
  const MyHomePage({super.key, required this.title});

  final String title;

  @override
  State<MyHomePage> createState() => _MyHomePageState();
}

class _MyHomePageState extends State<MyHomePage> {
  @override
  Widget build(BuildContext context) {
    return Scaffold(
      appBar: AppBar(
        backgroundColor: Theme.of(context).colorScheme.inversePrimary,
        title: Text(widget.title),
      ),
      body: Column(
        children: <Widget>[
          Text('Row', style: TextStyle(fontSize: 25),),
          Center(
            child: Row(
              mainAxisAlignment: MainAxisAlignment.spaceEvenly,
              children: <Widget>[
                Container(
                  margin: EdgeInsets.all(12.0),
                  padding: EdgeInsets.all(8.0),
                  decoration: BoxDecoration(
                    borderRadius: BorderRadius.circular(8),
                    color: Colors.lightBlue
                  ),
                ),
                child: Text(
```

```

Flutter',
style: TextStyle(
  color: Colors.red,
  fontSize: 20
),
),
),
